Advertising Production Manager

- Technical Support Technician
- Installation Coordinator
- Technical Consultant
- Account Manager
- Graphic Designer
- DTP Operator
- Printer Operator
- Production Technician
- Wrapping Specialist

Types of Testing

- **Performance Testing:** Identifying types of performance testing for e-commerce and streaming platforms.
- **Non-functional Testing:** Categorizing non-functional testing types for a banking application.
- **In-depth Analysis:** Exploring Smoke Testing and Regression Testing, understanding their differences, and the environments where they are executed.
- **Soft Skills:** Attention to detail, analytical skills.

API Testing-Testing API functionalities using specialized tools.

- **Activities:**
- Creating and validating API calls with Postman.
- Used Postman's testing library to create and modify automated API tests, tailoring scripts to meet specific objectives and ensure thorough validation.
- Organizing tasks and tracking progress using Trello.
- **Tech Skills:** Postman, Trello

Writing and executing SQL queries to retrieve and analyze data.

- **Activities:**
- Using DBeaver to interact with databases.
- **Tech Skills:** SQL, DBeaver.

Learned foundational concepts of HTML, CSS and JavaScript

- **Activities:**
- Gained an understanding of HTML structure, including elements, tags, and attributes.
- Applied CSS to style web pages, focusing on layout, colors, typography, and responsiveness.
- Learned JavaScript for automating tests
- **Tech Skills:** HTML, CSS, JavaScript

Gained hands-on experience with command line operations and version control using Git.

- **Activities:**
- Learned basic command line commands to navigate, create, and manage files and directories.
- Used Git for version control, including creating repositories, committing changes, and branching.
- Worked with Git commands like git clone, git pull, git push, and git merge to manage code versions and collaborate with teams.
- Applied GitHub for remote repository management, contributing to collaborative projects and tracking changes.
- **Tech Skills:** Command Line, Git, GitHub.

Kapusta (URL) - Scrum master and QA Tester

The project focuses on analyzing and improving the financial manager Kapusta through critical stages such as analyzing the terms of reference and the application interface, rigorous development and testing of scenarios, detailed reporting of results and identified errors for future optimization, as well as evaluating the program's final quality and readiness for release.

Activities:

- Leading daily Stand-Up meetings for planning and reporting the team's activities.
- Creating and updating the team's **Trello**(**URL**) board.
- Configuring **Qase**(**URL**) for writing and executing test cases, and **Jira**(**URL**) for bug reporting and tracking.
- Training team members for the optimal use of the platforms utilized.
- Monitoring the task status for all team members and their implementation time.
- Writing and executing test cases, as well as writing bug reports (the reports functionality has been assigned to me).

Asociatia oportunitati si cariere (ONG) - QA Tester

The project **Peviitor.ro**(**URL**) aims to simplify the job search process in Romania, regardless of the platform. The search engine created provides users with quick and efficient access to professional opportunities by indexing various sources in one place.

Activities:

- Writing and executing test cases for the organization's website
- Validating jobs for the main project, **peviitor.ro**, using the organization's internal tools
- API testing using internal tools and Postman
